

Suitability

CGL - Demanding, harsh use, wet or dry

Material Option

12mm CGL

Pilasters

Radiused edge 12mm CGL

Colour

Petal CGL range

Head Clearance Height

1950mm

Overall Cubicle Height

Maximum 2006mm

Privacy Design

150mm floor clearance (door)

150mm floor clearance (divisions)

Doc M Compliance Options

Inline inward and outward openings

Enlarged and ambulant

Emergency release indicator

Structural Details

Integrated head rail

Full length channels

No patch fixings or cleats

Floor mounted integral foot

Doweled fittings

Tamper proof fixings

Sprint provides a robust, practical solution for cubicle systems in busy sports facilities with suitability across changing, shower, and toilet applications.

With the hard-wearing, water-resistant qualities of CGL, Sprint is an excellent choice for areas experiencing high moisture including shower areas and busy sports changing facilities such as swimming pools and leisure centres.

Sprint is a semi-framed system with robust profile channels, allowing the system to be tailored to the individual design considerations of each project. The continuous channel feature encompasses an integral leg, providing strength, while the connection to the headrail provides exceptional stability. These, couple with three hinges per door, provide the robustness required for changing environments subjected to the rough and tumble of high traffic sporting applications.
